Professional Summary

Developer with 3+ years of experience in Java, Oracle Retail Point of Service (Xstore) customization and integration. Expertise in enhancing retail transaction flows, payment modules, surcharges, coupon management, and receipt formatting. Proven ability to optimize system performance, resolve critical production issues, and align solutions with retail client requirements. Hands-on experience in end-to-end configuration, implementation, and support across 100+ retail stores.

Technical Skills

Xstore Modules: OpChain Framework, Prompt Till Count, DTX Framework, Auth Framework, Device Configuration, Receipt Customization, Tender/Payment Integration, Discount Handling, Coupon Management, Surcharge Implementation, Replication
Languages: Java (Core, JEE), SQL, HTML5, CSS3
Frameworks: Spring Boot, Hibernate, JPA, RESTful APIs, React.js
Databases: Oracle, Sql Server
Tools: Git, Postman, Jira, Eclipse, IntelliJ IDEA, Maven, Tomcat
Concepts: OOP, Design Patterns, Agile, Debugging, Unit Testing

Professional Experience

Senior Software Developer *Oct 2026 – Present*
Valtech, India

- Design, develop, and enhance Oracle Retail Xstore POS functionalities using Java and JEE, delivering scalable solutions aligned with complex retail business requirements.
- Implement and customize core Xstore modules, including transaction processing, tender and payment handling, promotions, discounts, receipt configuration, and store-level parameters.
- Drive technical problemsolving across POS workflows, backend integrations, and configuration components, proactively identifying risks and resolving implementation challenges
- Develop robust business logic and framework-level enhancements using Xstore components such as OpChain, DTX, and Auth Framework to streamline retail transaction workflows.
- Integrate Oracle Retail Xstore with backend retail systems through REST APIs and configuration-driven interfaces, ensuring reliable data exchange and seamless system interoperability.
- Analyze complex technical issues, perform root cause analysis, and implement sustainable solutions to improve POS application stability, performance, and transaction reliability.
- Drive end-to-end development activities, including requirement analysis, technical design, implementation, code reviews, unit testing, defect resolution, and deployment support.
- Collaborate with business analysts, QA engineers, and cross-functional stakeholders to translate functional specifications into maintainable and production-ready solutions.
- Contribute to code quality, technical documentation, development standards, and continuous improvement initiatives across Oracle Retail Xstore implementations.

Associate Developer Oct 2025 - Oct 2026
OLR, Bengaluru, India

- Currently working on development of new POS features, including advanced tender handling, promotional logic, and configurable business parameters.
- Working on performance optimization for critical transaction flows, improving average response time by 20%.
- Enhancing integration between Xstore and back-end retail systems through REST API and DTX configuration improvements.
- Participating in design reviews, ensuring adherence to coding standards and best practices.
- Coordinating with QA and business teams for seamless production deployments and UAT validation.
- Recognition for the technical excellence for ownership of complex Xstore enhancements, and consistent high-impact delivery.

Service Analyst Aug 2023 – Oct 2025
OLR, Bengaluru, India

- Enhanced and customized Oracle Retail Xstore POS features for 100+ retail stores, achieving 15% efficiency improvement.
- Developed modules for surcharges, discounts, coupon handling, and payment integrations, reducing transaction errors by 60%.
- Customized receipt formats, promotional offers, and store parameters to improve customer experience by 25%.
- Optimized replication and backend logic, reducing downtime during system updates by 30%.
- Provided production support and conducted regression testing, ensuring seamless upgrades for large-scale deployments.
- Xstore version upgrade from v20 to v25 recently, ensuring smooth migration of custom modules, backward compatibility, and regression-free deployment.
- Collaborated with cross-functional teams to gather requirements and deliver end-to-end POS enhancements aligned with business goals.
- Proactive in solving complex issues and contributing to critical business solution discussions, showcasing strong leadership and communication skills.

Projects

BTA – Xstore Assisted Selling Auto Refund (Phase 2)

- Implemented multi-tender auto refund functionality in Oracle Xstore, enabling refunds across Credit Cards, Gift Cards, and e-Gift Cards for Assisted Selling orders.
- Enhanced the **BRT_AUTO_REFUND_JOB** to automate refund processing based on original payment sequence with intelligent fallback handling for failed transactions.
- Integrated Oracle Xstore with MuleSoft REST APIs to process gift card reloads, issue e-Gift Cards, and synchronize refund details with the Order Management System (OMS).

- Developed robust exception handling and enhanced the **BRT_XOM_AUTO_REFUND_LOG** framework for automated refund tracking, monitoring, and error reporting.
- Designed database enhancements, including the **BRT_VOUCHER** table, to manage e-Gift Card lifecycle and prevent duplicate voucher allocation.
- Implemented business logic to support employee-linked Assisted Selling returns, ensuring accurate customer association during automated refund processing.
- Collaborated with Business Analysts, QA, and integration teams to analyze FRDs, develop solutions, perform unit testing, and support SIT/UAT and production deployments.

Employee Discount Enhancement – Spend Cap & Event Control (Burlington — Xstore POS)

- Implemented enterprise-grade employee discount governance in Oracle Retail Xstore by enforcing **YTD and Event-based spend caps** using configurable `COM_CODE_VALUE` parameters.
- Designed and integrated a new backend table `BUR_EMPLOYEE_SPEND` in Xcenter to track **Year-to-Date and Event spend** per employee using immutable `Party_ID`.
- Developed real-time validation in POS flows (Sale, Return, Layaway, Cancel, Post-Void).
- Prevent transactions exceeding available employee balance
- Dynamically prompt users with remaining YTD/Event limits
- Ensure spend never drops below zero.
- Built robust synchronization between Xstore and Xcenter with **offline resilience**
- Queued updates when Xcenter was unavailable
- Logged failures and replayed transactions via replication queue
- Enhanced suspension logic to **auto-remove employee discounts** on suspend and revalidate balances on resume.
- Implemented spend validation during **Price Override** and **Layaway during Events**, including enforcement of a configurable maximum discount percentage.
- Customized receipts to print **live employee balance (YTD & Event)** after every discounted transaction.
- Delivered a scalable, audit-friendly solution aligned with retail compliance and operational controls across 100+ stores.
- Collaborated with Business Analysts, QA, and integration teams to analyze FRDs, develop solutions, perform unit testing, and support SIT/UAT and production deployments.

Anti-Money Laundering (AML) Enhancements for Oracle Xstore Brown Thomas & Arnotts (BTA)

- Designed and implemented configurable Anti-Money Laundering (AML) compliance enhancements in Oracle Xstore to satisfy Criminal Justice (Money Laundering and Terrorist Financing) regulations for high-value cash and gift card transactions.
- Developed business logic to enforce configurable cash and gift card thresholds using system parameters, triggering mandatory customer identification and AML verification workflows during tender processing.

- Implemented rolling AML threshold validation across linked customer transactions over configurable periods, supporting cumulative transaction monitoring and automatic threshold reset after AML verification.
- Enhanced customer onboarding workflow by introducing mandatory customer search and non-CRM customer creation for high-value transactions while ensuring customer data remained local to Xstore/XAdmin.
- Designed validation rules for eligible gift card redemption by verifying original purchase tender type, issuing store, business day, and configurable threshold limits before including redemption amounts in AML calculations.
- Integrated configurable database-driven parameters and feature flags for AML enablement, threshold limits, rolling periods, and compliance behavior without requiring code modifications.
- Implemented POS workflow enhancements including Tier-1 customer capture prompts, Tier-2 AML confirmation dialogs, manager authorization flows, and transaction state validations.
- Extended POSLog generation by introducing AML-specific transaction properties to improve compliance auditing, reporting, and downstream system integration.
- Collaborated with business analysts, QA teams, and stakeholders to convert regulatory requirements into scalable technical solutions, validate business workflows, and deliver configurable enterprise retail compliance features.

Education

Bachelor of Engineering in Electronics and Communication Engineering July 2022
DR TTIT, KGF, India

Certifications

- Oracle Retail Xstore Technical Implementation – Oracle, 2023
- Java Full Stack Development – Jspiders Bengaluru, 2022
- Spring Boot and REST API – Udemy, 2022
